

# NANJIL CATHOLIC COLLEGE OF ARTS AND SCIENCE

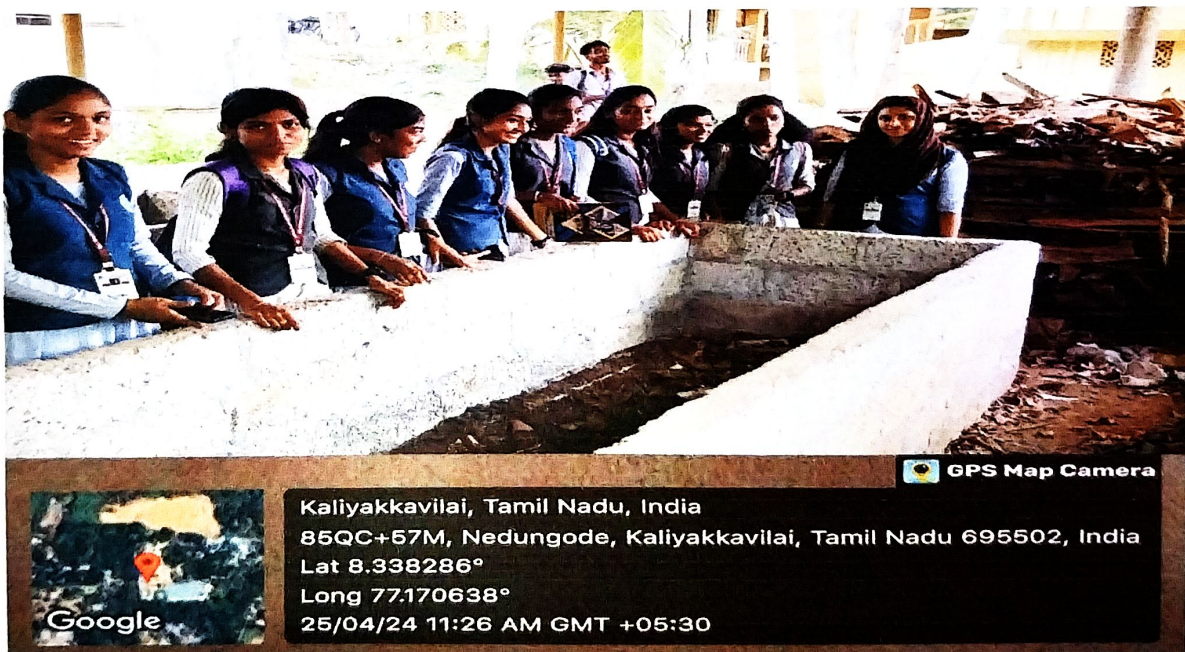

## KALIYAKKAVILAI

### DEPARTMENT OF ZOOLOGY

#### VERMICULTURE

The staffs and students of our department are actively maintained vermiculture pit in the campus to convert waste into wealth. Vermicompost is the product of the decomposition process using earthworm, to create a mixture of decomposing vegetable or food waste, bedding materials and vermicast.

Vermicomposting can also be applied for treatment of sewage and manure, fertilizer of vegetables and flowering plants. The students get a knowledge and awareness of the economical benefit of vermiculture. It might become awareness for them to protect the natural plantation free from hazardous or artificial fertilizers. It makes their potentialities to develop a tremendous growth in future.
