Greetings of the day.

Respected sir as per the discussion with the team SSL certificate is very important for the security of the web site as well as web application

What is SSL?

SSL certificates are used to create an encrypted channel between the client and the server. Transmission of such data as credit card details, account login information, any other sensitive information has to be encrypted to prevent eavesdropping.

With an SSL certificate, data is encrypted prior to being transmitted via the Internet. Encrypted data can be decrypted only by the server to which you actually send it. This ensures that the information you submit to websites will not be stolen.

We are recommending to purchase wild card SSL to secure Web site and our web applications

Pls refer to the following link
